ATIF MUBASHAR

Full Stack Developer | Node.js · React.js · Angular · PostgreSQL · MongoDB
Lahore, Pakistan | atifmubashar353@gmail.com | +92 3091560034 | linkedin.com/in/iamatifmubashar

PROFESSIONAL SUMMARY

Results-driven Full Stack Developer with around 2 years of hands-on experience architecting scalable, production-grade web and mobile backend systems. Proficient across the full technology stack — Node.js, Express.js, React.js, Angular, PostgreSQL, and MongoDB — with a strong track record of delivering complex features on time across 5+ live commercial projects. Expert in RESTful API design, JWT authentication, RBAC, real-time systems, cloud file storage (Amazon S3), and payment gateway integrations (PayFast, Mollie, Deposyt). Actively leverages AI-assisted development tools (Cursor IDE, Claude, OpenAI Codex) to ship high-quality code faster. Experienced collaborator in Agile/Scrum environments, consistently bridging backend complexity with clean, maintainable architecture.

TECHNICAL SKILLS

Languages & Runtimes: JavaScript (ES6+), TypeScript, HTML5, CSS3, SQL
Frontend: React.js, Angular, Tailwind CSS, Bootstrap, Responsive UI Design
Backend & APIs: Node.js, Express.js, RESTful APIs, JWT Authentication, RBAC, Middleware, WebSockets
Databases: MongoDB, PostgreSQL, MySQL, Database Modeling & Query Optimization
Cloud & DevOps: Amazon S3, File Upload & Storage, Git, GitHub, CI/CD Deployment Workflows
AI-Augmented Dev: Cursor IDE, Claude (Anthropic), OpenAI Codex — AI Agent Coding & Prompt Engineering
Payments & Integrations: PayFast, Deposyt, Mollie, Amazon S3, Third-Party APIs, Webhook Handling
Tools & Practices: Postman, VS Code, Agile/Scrum, API Testing, Code Review, Debugging, Third-Party Integrations

PROFESSIONAL EXPERIENCE

Software Engineer March 2025 – Present

Prisma Technologies — Lahore, Pakistan (On-site)

- Architected and shipped full stack features for 5+ live commercial products using Node.js, Express.js, React.js, and database-driven architectures — from API design to frontend integration.
- Engineered 30+ production RESTful APIs covering authentication, RBAC, services, middleware, validations, and controller logic across multi-role, multi-tenant applications.
- Accelerated delivery by 30%+ using AI-assisted development workflows (Cursor IDE, Claude, OpenAI Codex) — automating boilerplate generation, code review, and debugging across multiple production modules.
- Implemented real-time backend systems including WebSocket-based push notifications, live GPS tracking, and status update pipelines across 3+ production modules.
- Integrated 4+ third-party services including payment gateways (PayFast, Mollie, Deposyt), Amazon S3 file storage, and AI-powered customer support features.
- Optimized database queries, indexing strategies, and API response handling across 10+ modules — measurably improving system reliability and throughput.
- Resolved 50+ production and development issues, refactored legacy code, and led deployment-ready delivery of 5+ software projects.
- Collaborated in Agile/Scrum sprints with frontend developers, QA engineers, and stakeholders to deliver scalable, maintainable software on schedule.

KEY PROJECTS

ScholarWheels — School Transport Management Platform Sep 2025 – Apr 2026

Prisma Technologies

- Engineered a backend platform for school transport operations supporting 5+ modules: driver onboarding, vehicle assignment, ride scheduling, route configuration, and student tracking.
- Built 20+ RESTful APIs using Node.js, Express.js, and MongoDB with scalable data models and relationships across all transport modules.
- Implemented 4+ ride and route management workflows covering daily trip planning, pickup/drop-off coordination, driver allocation, and real-time status tracking.
- Built robust validation, error-handling, and controller logic across 15+ API operations to ensure request accuracy and long-term maintainability.
- Applied AI agent tools (Cursor, Claude) to accelerate route-optimization logic, reducing debugging time by ~30%.
- Collaborated with 3+ cross-functional team members to test API flows, resolve integration issues, and prepare features for live deployment.

Kapasi Glass Network — B2B Construction Workflow Platform Mar 2025 – Jun 2026

Prisma Technologies

- Developed 25+ RESTful APIs for a B2B platform managing clients, bids, jobs, purchase orders, job tickets, documents, and field measurements across 6+ business modules.
- Designed relational database models ensuring accurate data flow between clients, bids, POs, tickets, and field measurements.
- Implemented end-to-end bid and job management workflows: project creation, bid tracking, PO handling, job ticket processing, and construction task coordination.
- Built field measurement functionality enabling technicians to upload, annotate, draw, and store measurement data on digital documents and images.
- Integrated Amazon S3 for secure document and image handling — covering storage, retrieval, signed URL generation, and reporting workflows.
- Leveraged AI-assisted coding (Cursor IDE, OpenAI Codex) to generate service-layer boilerplate and accelerate sprint delivery.

Afrivalley MarketPlace — eCommerce & Money Transfer Platform Nov 2025 – Feb 2026

Prisma Technologies | www.afrivalley-marketplace.com

- Enhanced a production multi-role eCommerce and money transfer platform serving Admin, User, Seller, and Agent dashboards.
- Integrated PayFast payment gateway for order payments, transaction handling, payment status updates, and secure checkout processing.
- Diagnosed and resolved critical frontend and backend issues across APIs, business logic layers, database queries, and UI flows — improving platform stability and UX.
- Refactored full stack modules to improve code maintainability, API reliability, and production readiness.
- Used Claude and Cursor to debug complex order-flow logic and improve API response consistency under production load.

Course Activity Management & Monitoring System (CAMMS) May 2025 – Dec 2025

Final Year Project

- Developed a full stack web application automating 10+ instructor workflows, task tracking, and LMS activity reporting using Node.js, Express.js, and React.js.
- Implemented secure JWT authentication and RBAC for 3+ user roles (Admin, Instructor, and extensible role types).
- Built 8+ activity tracking modules: MDB replies, ticket handling, assignment uploads, grading, GDB evaluations, email response tracking, and weekly sessions.
- Designed automated reporting workflows generating weekly, monthly, and five-month productivity summaries with completed, pending, and performance metrics.

- Delivered a responsive React.js dashboard with real-time progress tracking, alerts, notifications, and Excel/PDF export capabilities.

Examencentrum — Driving License Quiz & Practice Exam App Mar 2025 – Jun 2025

Prisma Technologies

- Built 25+ RESTful APIs for a multi-role exam platform supporting Admin, Instructor, and Candidate workflows.
- Developed authentication, RBAC, question bank management, category management, difficulty levels, and full exam workflow APIs.
- Integrated Amazon S3 with 3+ secure media handling features: signed URLs, file type validation, and optimized upload pipelines.
- Created admin dashboard APIs across 5+ modules to manage users, roles, questions, exams, and performance statistics.
- Implemented 3+ candidate analytics features tracking accuracy rates, improvement trends, and time-per-question performance metrics.

EDUCATION

Bachelor of Science in Computer Science

Virtual University of Pakistan | CGPA: 3.62 / 4.00

Intermediate (Pre-Engineering)

Punjab College, Lahore

Matriculation (Science)

Govt. Central Model School, Lahore
